Time to complete

1

Do you agree with the vision in the draft action plan, or do you think there is anything important missing?

Our vision is that by 2030 we will have reduced our emissions and built our resilience to the impacts of climate change.

I agree that is a good vision but I understand Tasmania is already doing well in this space (aren't we already at net zero?) couldn't we be more ambitious with our target eg a global leader in having the lowest car on emissions

2

Do you agree with the three priority areas in the draft action plan, or do you think there is anything important missing?

Our priorities for climate change are to:

- 1) Improve information and knowledge about climate change in Tasmania
- 2) Support transition and innovation to reduce emissions
- 3) Build adaptation and resilience.

They are good priority areas. We could add #4 promoting Tasmania's example to the rest of the world and use it in marketing Tasmania (as part of our brand) eg this product comes from a carbon neutral manufacturer

3

Can you think of any actions that are missing from Priority Area 1? How can we make sure the information we make about climate change is suitable for children and young people?

Priority Area 1 is about improving Tasmania's information about climate change.

Key actions include:

- improving the information we provide to businesses and the community,
- providing money for research
- developing climate change resources for schools.

A statewide competition in science where climate change or low emissions are a priority with a high profile prize (like a trip to questacon or the Antarctic!!)

4

How do you think we should help businesses and communities to reduce their emissions?

Priority Area 2 is about reducing Tasmania's emissions.

Examples of projects could include:

- supporting research to find new ways to reduce emissions
- funding programs to support businesses and communities to reduce their emissions (such as installing electric vehicle chargers, introducing electric buses, energy efficient appliances in homes or improved waste management)
- providing information to the community
- changing the law to make it easier for businesses and homes to use new technologies.

Changing the law is very effective (like they did when they introduced recycling and fined people for not using bins)

5

How do you think we should help businesses and communities to prepare for the impacts of climate change?

Priority Area 3 is about making sure Tasmania is prepared for the impacts of climate change.

Examples of projects could include:

- working with local government to plan for climate change
- working with Tasmanian Aboriginal communities (for example, Aboriginal cultural burning to reduce bushfire risks)
- helping protect vulnerable populations from extreme weather events like heatwaves, bushfires and floods
- supporting businesses to plan for natural disasters

Not sure

6

How can we make sure Tasmanians (especially children and young people) can access information about climate change and hear about opportunities to provide feedback on our action to address climate change?

We will:

- provide regular updates through our website, newsletter and social media (Facebook)
- monitor the progress of all projects in the action plan
- prepare annual reports on Tasmania's greenhouse gas emissions and action on climate change

Social media - instagram influencers

7

Do you have any other questions or comments?

No

8

Do you give permission for the Climate Change Office to publish your submission? *

Yes

No

9

If you give permission for us to publish your submission, would you like your name to be included?

Yes

No

10

Please tell us your name

This question is optional. You can choose to remain anonymous if you would prefer.
