

# 'Amending Tasmania's climate change legislation' submission

## Form Summary

First name: Adrian

Last name: Sharkey

Organisation  
name: Individual

Email  
address:

Submission: I am impressed with the state governments focus on climate change action. I would like to submit a few recommendations: 1: accelerate vehicle emissions reductions targets immediately by subsidizing electric vehicles for private, business and government, to ensure increased uptake ahead of 2026. This will also provide suppliers the right initiatives to bring EV's into Tasmania, even ahead of the mainland. Develop and execute a comprehensive media campaign to educate Tasmanians on the benefits of EV's. 1A: strengthen solar panel and battery uptake by subsidization, including options for Vehicle to Grid technology uptake. This will provide immediate benefits by enabling households, business and government to utilize power usage from vehicle battery power which is v2g enabled 1B: ensure transport emissions reduction through electric and hydrogen technologies to cover all sectors, including agriculture, transport (including commercial marine), mining. 2: develop the retiring of all diesel, petrol assets statewide by 2030. Including technology pathways and subsidization for conversions from ICE to EV/Hydrogen power.

Consent to  
publish: Yes, I am happy for my submission to be published
