Time to complete

1. Do you agree with the proposed vision and goals for the action plan? Which goals are you most supportive of? Are there any other goals that should be considered?

Pleased there is an action plan but it does need to be real action, not just carbon credit schemes.

2. Will the three priority areas -
 - (1) information and knowledge
 - (2) transition and innovation and
 - (3) adaptation and resilience, help Tasmania achieve its legislated 2030 emissions reduction target, and its vision for action on climate change? Are there other issues not covered by the three priority areas?

These are very broad statements that could be applied to any program ever. Real implementation of emissions reductions especially on industrial level is the only thing that will truly have a positive impact.

3. Will the key actions under Priority area 1 help support decision making for you and your community or organisation? What types of projects should be supported under the final action plan?

The organisations and groups I belong to have the information and knowledge. I think a priority should be the Electricity Tasmania program which is part of Rewiring Australia.

4. Will the key actions under Priority area 2 support Tasmania to achieve its 2030 emissions reduction target and continued emissions reduction across Tasmania? What types of projects should be supported under the final action plan?

Electrify Tasmania is a project that would be perfect to develop broad domestic and industrial reduction of emissions.

5. Will the key actions under Priority area 3 build resilience and support adaptation planning across Tasmania? What types of projects should be supported under the final action plan?

We need real and significant emissions reductions - not just offsetting emissions via carbon credits
No new fossil fuel developments, we do t need any with hydro and solar
We must end native forest logging as it is the highest emitting sector in the state
Schemes and subsidies for house holds to switch to solar and electrify heating and cooking
Mass expansion of solar and community batteries.

6. Are there other ways the government could make its action on climate change, and progress towards meeting its targets, more transparent and accessible?

Tasmania can be a model for the world with production of clean renewable energy. The majority of the population supports these concepts, there needs to be some support for people and businesses for installation of appliances and to buy EVs.

7. If you have any further questions or feedback please add it here

8. Please provide your full name, or the name of your organisation *

Vivianne Vandenberg

9. Please provide your email address (optional)

10. Do you give permission for the Climate Change Office to publish your submission? *

Yes

No
