Subject: Waste Emissions Reduction and Resilience Plan - online submission form

Categories:

Name/Organisation: Shayne Murphy
Address:
Email:

How can we build on the work already underway to reduce emissions and build resilience? : may I respectfully suggest that there are already opportunities to reduce landfill waste in Tasmania and indeed in most states some 5 years ago i went to the state government along with representatives of the Paper manufacturer Norse Skog to seek support for an integrated waste recycling process where much of the household waste, CND waste streams could have been separated for the purpose of being treated and then combined with unused waste biomass streams to be prepared as coal replacement boiler fuel for the Boyer Paper mill. This would have seen a significant reduction in landfill waste and that before we even consider organics and other waste fractions.

What future opportunities will have most impact: these same opportunities still exist today and indeed the possibilities are even greater with the economic benefits and environmental benefits.

Priorities or future opportunities missing from draft Plan: Again, and with great respect, unfortunately there are many.

Any other ways we can collaborate: Absolutely.

Permission: I give permission for my/my organisation's submission to be published.
