1. Do you agree with the proposed vision and goals for the action plan? Which goals are you most supportive of? Are there any other goals that should be considered?

The vision and goals lack specificity and ambition. In principal many are good; such as 100% electric vehicle Government fleet but the time line is too long. The fleet vehicle purchase needs to turnover to allow Tasmanian private purchase of the used Gov vehicles to really make a change from fossil fuel use and the fuel excise that Tasmania is paying now. Is it \$1bn per year?? Wow; what a difference that could make to health, education, and socio-economics in our state.

Other goals; communication available for all Tasmanians. Social media is used widely in Tasmania...the message needs to saturate, invite, engage...and I don't see that yet. Subjects such as grants for electrification of homes (heat pumps, solar panels, battery, induction cooktops etc etc) the Brighte no-interest loan for these is available also. C'mon-=lets see some win-win for the rentals, social housing people.

2. Will the three priority areas -
 - (1) information and knowledge
 - (2) transition and innovation and
 - (3) adaptation and resilience, help Tasmania achieve its legislated 2030 emissions reduction target, and its vision for action on climate change?
 Are there other issues not covered by the three priority areas?

These are key; however lacking an ambitious, aggressive target will not achieve these priority areas. Any innovation has less than 7 years to succeed whereby the Australian Capital Territory has instituted many changes toward zero emission; and other countries (Norway, Denmark, Germany, etc.) have made changes. Recycling, decreased waste already happens. It shames me that our aluminium can incentive is not running-SA has kept this going for years...

3. Will the key actions under Priority area 1 help support decision making for you and your community or organisation? What types of projects should be supported under the final action plan?

Community engagement and determination. Local champions to lead change, education that is appropriate to stage of change groups. Positivity and win-win situations such as a community run bulk buy of PV, induction cooktops, EV's...through to bulk buy goods into consumer packaging that decreases waste, landfill. Community directing local and State government to determine positive change and working in partnership rather than us-them. Please.

4. Will the key actions under Priority area 2 support Tasmania to achieve its 2030 emissions reduction target and continued emissions reduction across Tasmania? What types of projects should be supported under the final action plan?

Reliable publically accessible EV charge stations. More charge stations than the 1 in Hobart...seriously?! Launceston has blitzed Hobart on this and it's shameful. As above; 100% EV Government fleet by 2025 so there's a rollout of used EV more affordable for private purchase for Tasmanians. Innovation?-see above point. Why re-invent the wheel. Less reliance on the 'we're already zero emission' that rests on Tasmania's hydro-electricity and forests...and accountability for importing Victorian dirty electricity.

5. Will the key actions under Priority area 3 build resilience and support adaptation planning across Tasmania? What types of projects should be supported under the final action plan?

Indigenous and elder representation regarding the role of controlled burning. Less onerous paperwork for Parks regarding burning and smaller areas of burn. As the climate warms burning shall become hazardous. Caring for our developing communities-that is children-who inherit what we don't care for.

6. Are there other ways the government could make its action on climate change, and progress towards meeting its targets, more transparent and accessible?

Government (local, state, federal) can listen to communities who are scared, angry, resentful-never ignore the folk who vote for them and pay their wages. Our State (planet) depends on collaborative, positive communication by listening and negotiating with each other to get best outcomes for our Earth.

7. If you have any further questions or feedback please add it here

Sustainability is social, environmental and economic. All three of these must be ticked to ensure benefit to our State. The State Government and elected representatives have an inherent responsibility to include all individuals, groups, and institutions that can contribute to a better Tasmania that is carbon negative-not merely neutral. Tasmania's size, geography and population is a perfect place for leading change for the rest of Australia.

8. Please provide your full name, or the name of your organisation *

Elizabeth Grey

9. Please provide your email address (optional)

10. Do you give permission for the Climate Change Office to publish your submission? *

Yes

No
